Commissioner for Patents
Washington, D.C. 20231

Sir:

In response to the Office Action dated March 28, 2002, please amend the above-identified application as follows:

IN THE SPECIFICATION:

Page 23, please delete the first full paragraph, and replace it with the following new paragraph:

Therefore, the axial length of the run-out preventing portion with which the likelihood that the roller 10 is damaged when it is inserted into the pocket is kept as low as possible while the rotating performance thereof is maintained is equal to or less than the roller effective length e and preferably greater than 0.75 times the roller effective length e. In a case where the axial length of the run-out preventing portion is set at 0.75 times or less the roller effective length e in length, when a retainer and roller assembly comprising a retainer and rollers is installed between races, the rollers are inclined, this making it difficult to so install the retainer and roller assembly.
